

A.AJAX & Json

Make your own interface to create tabs to display usernames by requesting users from this API: <https://jsonplaceholder.typicode.com/users>

When the user click on one of the username tab display his posts' titles by requesting the clicked user's post from this link :

<https://jsonplaceholder.typicode.com/posts?userId=userId>

Note: do not request the posts on page load the user must click on a user tab to request his posts.
